

Shelfforce

Smart Shelf Technology

30% of customers who find empty product shelf abandon!

Increase both customer satisfaction and sales revenues; reduce your operational expenses by performing continuous shelf control with Smart Shelf Technology.

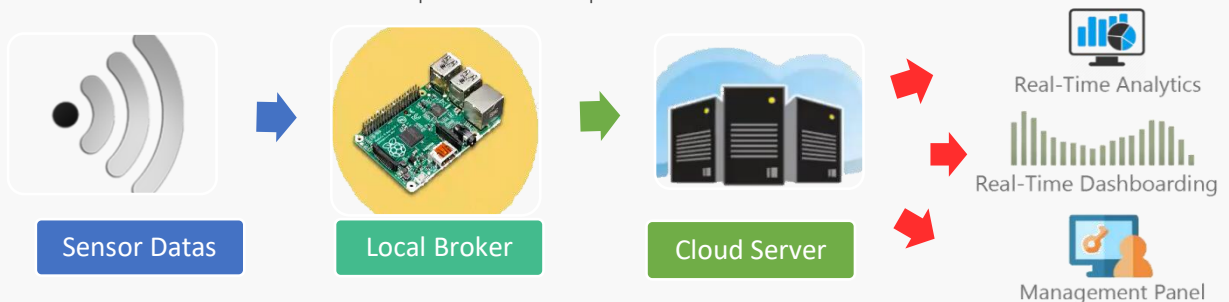

HOW IT WORKS?

Image processing technology and electronic sensors help detect the product shelf placement and quantity. Inventory changes in the shelves are transmitted to the system in real-time. The system creates warnings or automated dispatch orders for products below the critical stock threshold.

FEATURES:

- Planogram compatibility check and periodic product analysis
- Real-time product inventory changes tracking
- Performing different product analysis with Image processing technology
- Detection of stock-outs and product misplacement

BENEFITS:

- Answer customer demands with real-time stock analysis.
- Save operational labor expenses with automatic dispatch orders.
- With sales speed analysis improve and adjust your operational processes.
